

Name _____

Pumpkin True or False?

Here are a few more hypothesis you can do as a class.

- The number of longitudinal lines of a pumpkin is always odd.
- The larger the pumpkin, the more longitudinal lines you will count.
- The circumference is always greater than the height.
- The size of the whole pumpkin will determine whether the pumpkin will sink or float. A large pumpkin will sink, a small pumpkin will float.
- Cut pieces of pumpkin will float in water.
- The larger the pumpkin, the more seeds it will contain.
